This form serves as Litter Announcement and application for creating pedigrees for the entire litter. The application must include copies of the pedigrees of both parents. Application period must be within 8 weeks. For any requested corrections or changes that the club is not responsible for, fees may apply. Title of the parent animals are only accepted in a family tree when the title evidence is submitted. Stillbirths or late juveniles must be listed. The signature confirms that the breeder has given truthful information. If the entry of the chip numbers is desired in the family tree, this can be specified later. If no crosses were placed in the breeding approval column, a pedigree breeding barrier will be created automatically.
